

ABOVE GROUND RAINWATER HARVESTING FOR GARDENS

- Bulk rainwater storage to defeat hosepipe bans
- Storage tank of tough recycled polyethylene*
- Supplied with all connections ready for simple DIY assembly
- Stainless steel Wisy downpipe filter removes virtually all debris, moss, leaves, insects, etc.
- * Many tank sizes are available from 400 litres upwards

- Submersible pump with built-in flow controller for fully automatic operation
- Up to 4 bar pressure for sprinkler systems, car washing etc.
- Built-in dry-run protection and auto pump restart
- Minimum maintenance
- Extra tanks can be added to increase capacity

Wisy rainwater filters are available to fit most common UK and European round pipe sizes; 68, 76, 80, 87, 100 & 110mm diameter downpipes. They cannot be used in square section pipes.

The 0.44mm mesh removes virtually all debris, and thus provides clean usable water, without the odour and discolouration normally associated with garden water butts. Filters normally require cleaning at two monthly intervals but in certain situations may require cleaning more frequently.

We are the UK's sole supplier of Wisy products for rainwater utilisation

GARDEN RAINWATER SYSTEM

Our RainSava® Garden Rainwater Harvesting System has been designed to provide a good quality, reliable, and cost-effective solution for those wishing to go a stage further than a conventional garden water butt. In particular it is suitable where a hose-pipe ban is likely during our increasingly dry summer months, and enables the user to store a significant quantity of water to get through prolonged dry periods.

The harvested water is collected by a special filter unit which removes any debris present (leaves, moss, bird lime etc.) and diverts the cleaned water into one or more bulk storage tanks. The debris and a small amount of water continues to the drain in the usual manner.

Being naturally soft and relatively uncontaminated, rainwater is ideal for all plants (especially lime-haters), garden ponds and also reduces the detergent required when used for car washing.

The system is supplied as a DIY package requiring the minimum of fuss to install:

- Polyethylene tank (above-ground use only) complete with inlet and outlet connections, & optional boss for linking additional tank(s).
- Wisy RS type downpipe filter collector. 95% efficient
- Submersible pump with integral flow control and dry-run protection
- Pump suction filter
- Tank sizes from 400 to 30,000 litres
- Additional tanks can be added if required

the RS type filter is suitable for roof areas up to 100m². For larger roof areas we also have the FS version which is suitable for roofs up to 150m². For larger roofs either use multiple downpipe filters or one of our Vortex filters can be used.

We have a wide range of polyethylene tanks - water stays clean and sweet as both organic matter and sunlight are eliminated. An optional connecting boss provides a link to additional tanks where required

The Wisy RS Filter Collector showing its unique operating technique.

RS Filter Components

- 1 - Upper housing
- 2 - Filter insert
- 3 - Housing
- 4 - Collection area
- 5 - Clean water outlet

High quality Beta submersible pump. The built-in flow controller means the pump operates automatically when a tap or other outlet is opened. It will also switch the pump off in the event of dry running.

Available in several versions for direct pumping or for attaching a suction filter.

Multi-fit outlet connection.
